

BabelEbook Test Document

Chapter 1: Origin

This is a sample document for testing PDF OCR conversion. Its content will be rendered as page images and extracted by a vision-language model based OCR backend.

The document contains multiple paragraphs to verify layout analysis, reading order, and chapter segmentation.

Chapter 2: Structure

The EPUB output should preserve heading hierarchy and generate a table of contents accordingly.

If OCR confidence is low, the system can invoke an LLM verification backend to review low-confidence text blocks.
